

Thinking about change

Scaling Regenerative Agriculture

Pieter de Vos, PhD

Challenge Question

“How might we **grow** Alberta's regenerative agriculture system in a way that preserves its **integrity**, while maximizing **the positive social, environmental,** and **economic impacts** for **communities**?”

**We are in
the Change
Game!**

renew

Exploration Phase

- Creative, messy & uncertain
- Multiple Perspectives
- Probes & Little Experiments

Maturity Phase

- Stability
- Specialisation
- Standardization
- Low Risk Tolerance
- Return on investment

conserve

scarcity trap

charisma trap

chronic disaster trap

rigidity trap

growth

(re)birth

Development Phase

- Entrepreneurial
- Adaptive structure
- Prototypes & Pilot Projects
- Risk-taking

Release Phase

- New Energy & Urgency
- Chaotic
- Loss, Anger, Conflict
- Little structure

collapse

Explore

What new ideas, approaches or processes might we consider?

What is **worth trying out**?

Exploration

- Creative, messy & uncertain
- Multiple Perspectives
- Probes & Little Experiments

Maturity

- Stability
- Specialisation
- Standardization
- Low Risk Tolerance
- Return on investment

Conserve

What ways of doing or thinking are **working well**?

What should we **continue to support and strengthen**?

(Re)Birth

Which of our strategies will we **invest in and develop further**?

Development

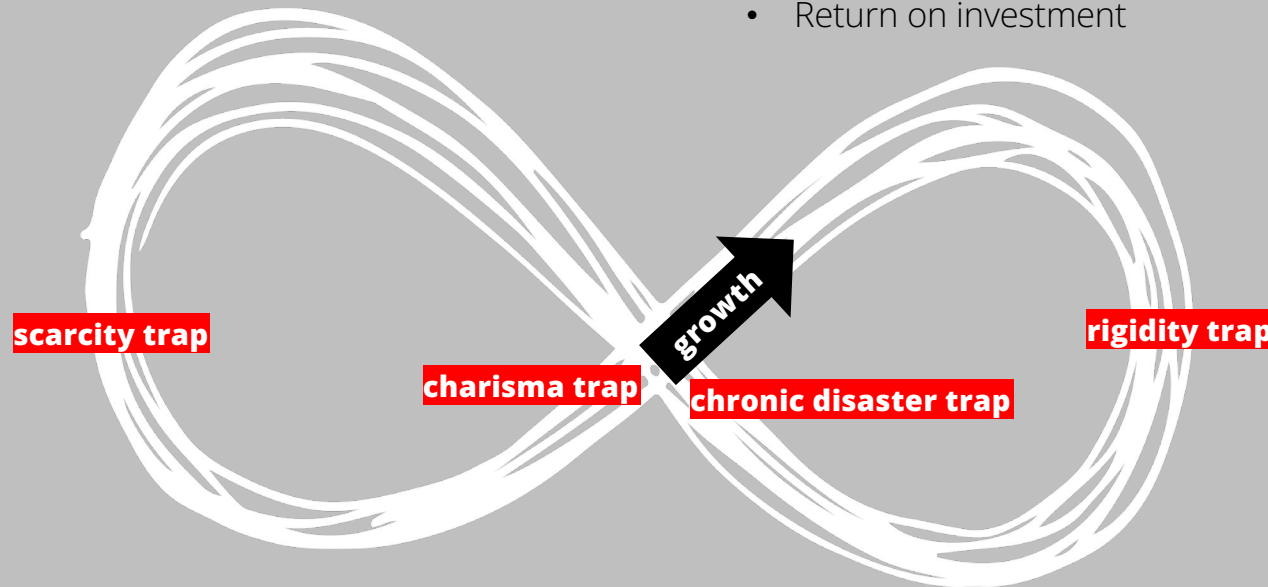

- Entrepreneurial
- Adaptive structure
- Prototypes & Pilot Projects
- Risk-taking

Collapse

- New Energy & Urgency
- Chaotic
- Loss, Anger, Conflict
- Little structure

Release

What ways of doing or thinking are no longer fit for purpose and we should **let go of**?

Leverage Points for Change

Shifting individual, organizational, and
system behaviours

Shifting the behaviour of individuals & organizations

Some of our work is aimed at influencing the **actions** of key system actors: individuals and organizations.

The **behaviour** (the decisions, actions and investments) of producers and others along the value chain is likely influenced by their...

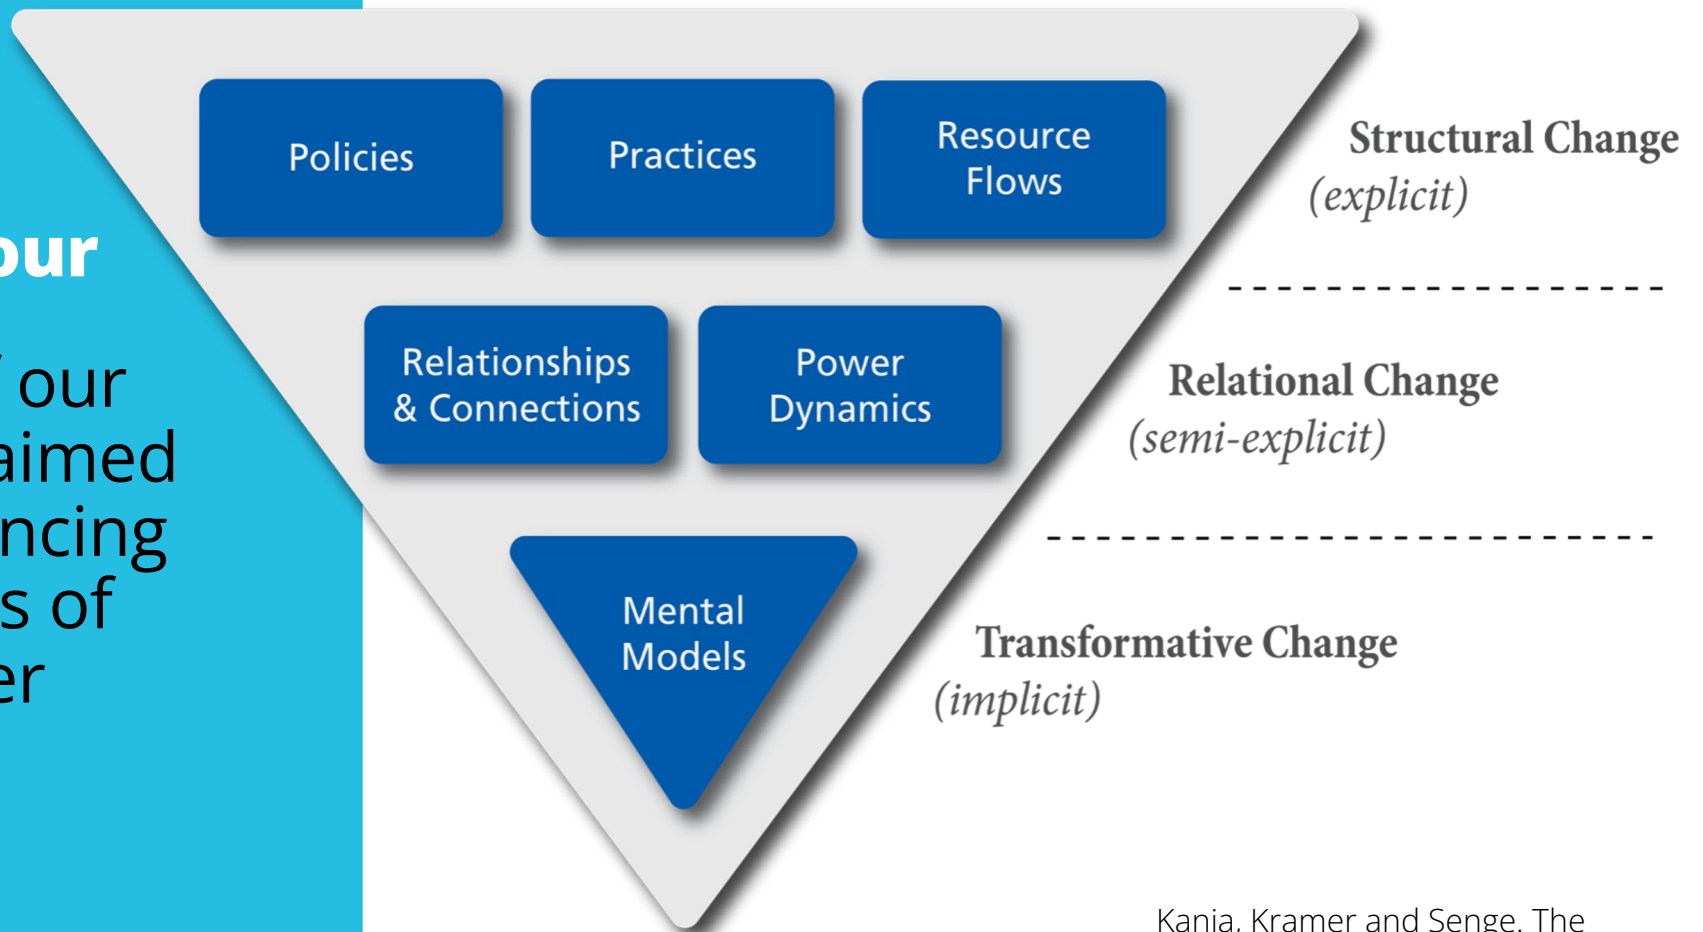

Knowledge &
Capabilities

Opportunities
(physical, social,
economic)

Motivation

interests)

Behaviour

Some of our work is aimed at influencing elements of the larger system

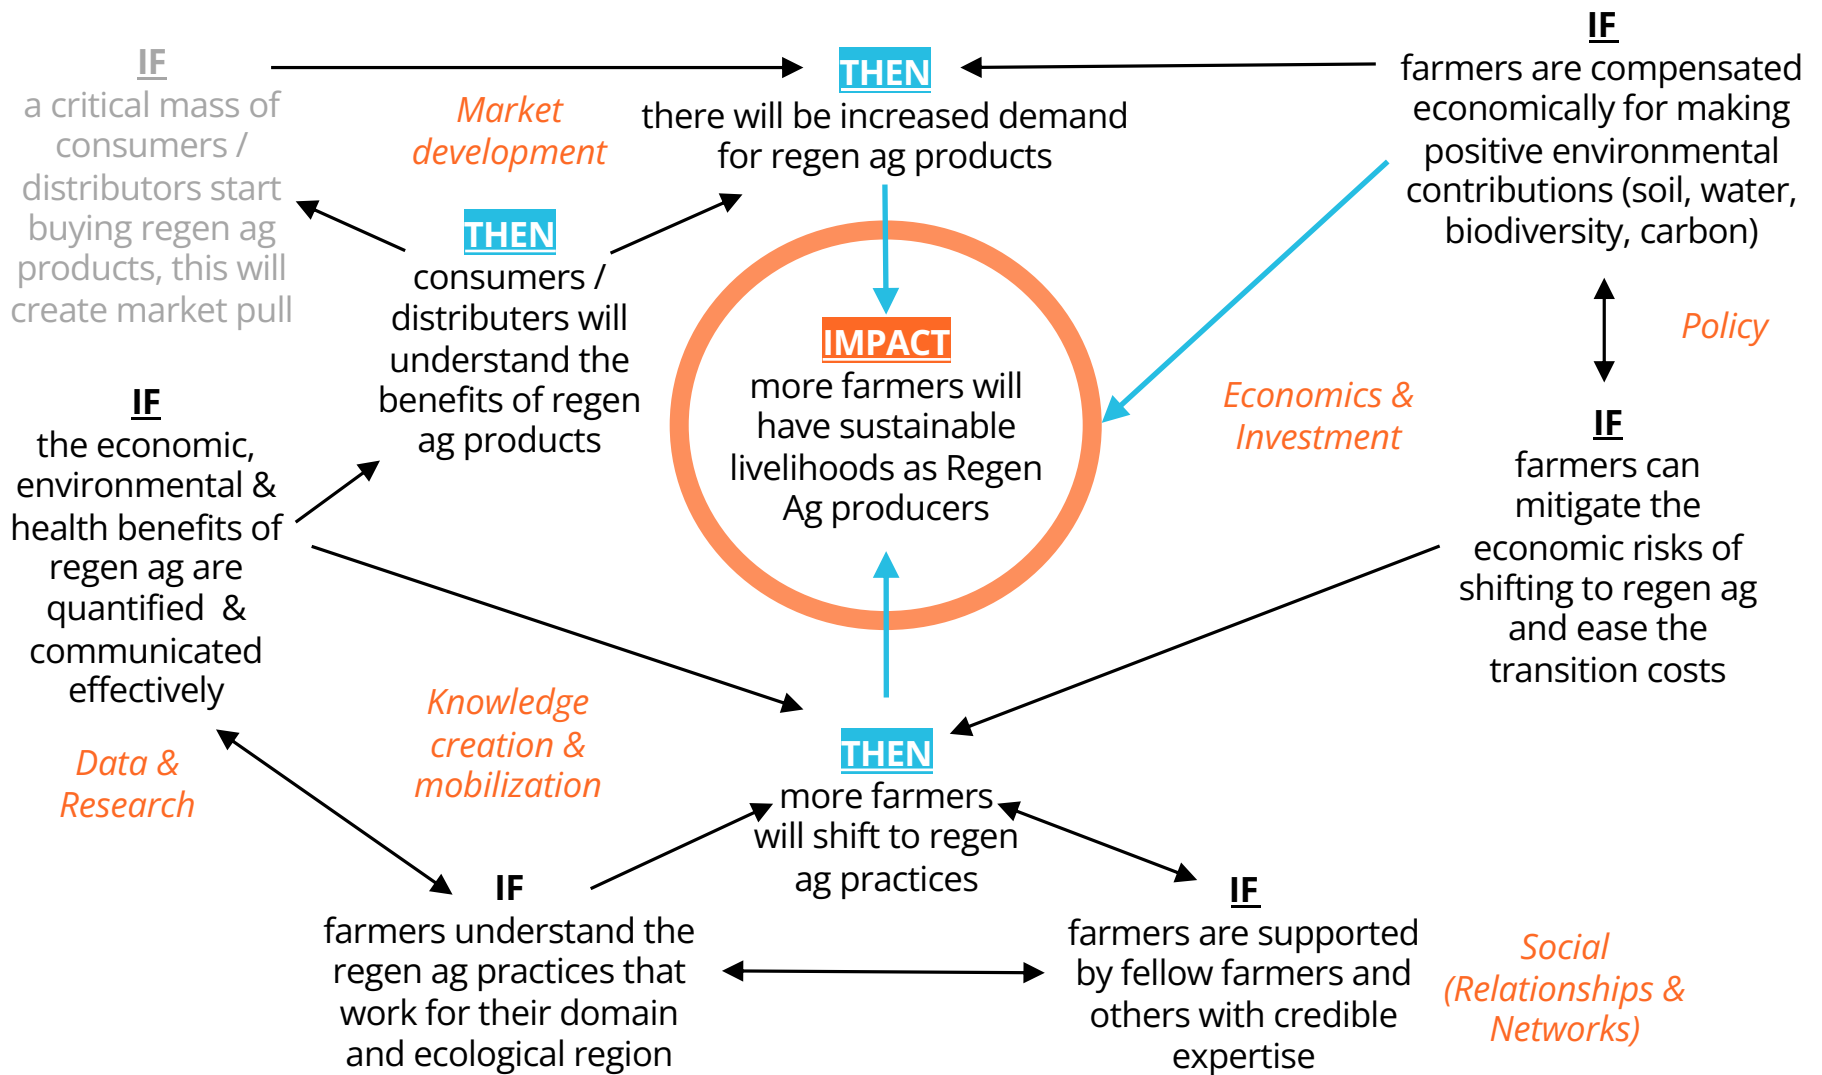

Kania, Kramer and Senge. The Water of Systems Change

How do we become more
explicit about the
assumptions that
underpin our strategies
and our impacts?

Naming our assumptions about change

Adapted from Mark Cabaj,
Here to There, 2012

1. What is the **working definition** of the challenge we are trying to address?
2. What is the **pattern of outcomes** we want to shift?
3. What are the **causes** underlying this challenge?
4. What are the **leverage points** for change we aim to address?
5. What are the **starting point strategies** for addressing these challenges?
6. What is our group's **role** in moving these strategies forward?
7. What are the **principles**, values and simple rules?

**Tying it all
together**
